About Tyra Biosciences

Tyra Biosciences, Inc. is a precision oncology company focused on developing purpose-built therapies to overcome tumor resistance and improve outcomes for patients with cancer. TYRA is using its proprietary SNÅP platform, which is optimized to enable rapid and precise refinement of structural design through iterative molecular SNÅPshots, in order to generate next-generation product candidates that are specifically designed to address acquired drug resistance and provide alternative treatment options. TYRA is initially focused on developing a pipeline of selective inhibitors of the Fibroblast Growth Factor Receptor (FGFR) family members, which are altered in approximately 7% of all cancers. TYRA is advancing multiple product candidates toward the clinic including its lead product candidate TYRA-300, an FGFR3 inhibitor with an initial focus on patients with bladder cancer, and TYRA-200, an FGFR2 inhibitor with an initial focus on patients with intrahepatic cholangiocarcinoma who have developed drug resistance mutations from existing FGFR inhibitors.
